Click here to bring up Track Control

Click here to view a profile of your displayed track

NOTE: OziExplorer always uses the Track field #1 to generate it's file from Moving Map. If you wish to follow a track file that has previously been created you need to load it up and then move it away from Track field #1 to say Track field #2. This will permit your navigation track file to appear on screen while Moving Map is generating your actual track file.

Click here to bring up a record of each and every track point recorded in this track file. Note that when you highlight any track point it's unique location within the track file is shown on the map and all it's unique details are available to you.

Click here to create your own Track File. Then place cursor on map & click to create a track point, then further along the proposed course click again to create a second track point; both will be joined by a straight line thus creating your proposed track.
